

# The Cascarin Method Manifesto

I, Cesar ontiveros, also known as Cascarin,  
created The Cascarin Method in 2025.

The Cascarin Method is a universal open standard for sensory communication,  
designed for blind, deaf, and deafblind communities. It uses patterns of  
vibration, sound, or light to represent letters, numbers, and symbols.

This system is released as an open standard under the Creative Commons CC0 License.  
It is free for anyone to use, adapt, and share. It may not be patented, owned,  
or restricted by corporations, governments, or individuals.

The Cascarin Method is a nonprofit effort. Its sole purpose is to give people  
new ways to communicate and navigate the world.
